LINKING GRI AND CDP

HOW ARE GRI'S G4 GUIDELINES AND CDP'S
2016 CLIMATE CHANGE QUESTIONS ALIGNED?

Linking GRI and CDP

GRI and CDP have worked together over the years to ensure alignment in their indicators on climate change and energy, improving the consistency and comparability of environmental data, and making corporate reporting more efficient and effective. As a result, all information requested in CDP's climate change questionnaire can be reported in a G4-based report, if the climate change related Aspects have been identified as material by the reporting organization.

This document shows how GRI's G4 Guidelines and CDP's climate change questions (2016) are aligned. GRI and CDP continue to work together to align best practice and avoid duplication of disclosure effort to ease the reporting burden for the thousands of companies that use CDP's climate change and supply chain programs and the GRI Sustainability Reporting Guidelines.

About GRI

GRI is an international independent organization that helps businesses, governments and other organizations understand and communicate the impact of business on critical sustainability issues such as climate change, human rights, corruption and many others. GRI's vision is to create a future where sustainability is integral to every organization's decision making process. With thousands of reporters in over 90 countries, GRI provides the world's most widely used standards on sustainability reporting and disclosure, enabling businesses, governments, civil society and citizens to make better decisions based on information that matters.

Website: www.globalreporting.org

About CDP

CDP is an international not-for-profit organization working to transform the way the world does business to prevent dangerous climate change and protect our natural resources. CDP sees a world where capital is efficiently allocated to create long-term prosperity rather than short-term gain at the expense of our environment. CDP holds the largest collection globally of self reported climate change, water and forest-risk data. Through its global system companies, investors and cities are better able to mitigate risk, capitalize on opportunities and make investment decisions that drive action towards a more sustainable world.

About GRI's Sustainability Reporting Guidelines – G4 and CDP's Environmental Reporting System

GRI Sustainability Reporting Guidelines – G4

The GRI Sustainability Reporting Guidelines – the most widely used sustainability reporting framework in the world – enable all companies and organizations to report on their economic, environmental and social performance and impacts and their governance approach. The fourth generation of the GRI Guidelines, G4, was launched in May 2013 and has been revised and enhanced to reflect important current and future trends in sustainability reporting.

The G4 Guidelines have increased user-friendliness and accessibility. The emphasis on what is material encourages organizations to provide only information that is critical to their business and stakeholders. This means organizations and report users can concentrate on the sustainability impacts that matter, resulting in reports that are more strategic, more focused, more credible, and easier for stakeholders to navigate.

CDP's environmental reporting system

CDP provides the only global environmental reporting system. Every year CDP sends requests for information on behalf of investors and purchasing organizations to thousands of companies worldwide. In 2015 over 5,500 companies responded to CDP's information requests on climate change, water and forests through CDP's online response system using CDP's guidance documents. Over 5,000 of those companies were scored using CDP's climate change scoring methodology.

The data collected by CDP enables investors, companies and governments to mitigate risks from the use of energy and natural resources and identify opportunities from taking a responsible approach to the environment.

CDP's runs a public consultation on its questionnaires every September. In addition, feedback on CDP's system can be provided all year round through CDP's website.

Download CDP's 2016 information requests, guidance documents and scoring methodologies at: www.cdp.net/guidance

Future areas of collaboration

GRI and CDP will work closely for future iterations of the GRI Guidelines as well as for CDP's questionnaires. This is an important step towards global standardization of corporate natural capital disclosure to capital markets.

GRI and CDP have aligned on water reporting, where appropriate. Both organizations will continue working to streamline global water reporting.

In addition to climate change and water, CDP engages with companies on their production and use of forests risk commodities. These are commodities most responsible for deforestation globally. GRI does not cover this area specifically. However, where appropriate the information reported through CDP's forests questions could be included in a G4 report as part of the following Aspects: Supplier Environmental Assessment, and Products and Services.

Introduction

GRI and CDP have worked together over the years to ensure alignment in their indicators on climate change and energy, improving the consistency and comparability of environmental data, and making corporate reporting more efficient and effective. As a result, all information requested in CDP's climate change questionnaire can be reported in a G4-based report, if the climate change related Aspects have been identified as material by the reporting organization.

The new G4 guidance is designed to be compatible with a wide range of different reporting formats and has been developed in alignment with internationally recognized frameworks which are referenced throughout the text, including CDP's information requests. CDP was an active contributor to the revision of the GHG emissions disclosures in the G4 Guidelines, ensuring that both reporting frameworks are closely aligned. This close alignment has been achieved because both frameworks have drawn heavily on the Greenhouse Gas Protocol Corporate Standard and Scope 3 (Value Chain) Standard, produced by the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD)¹.

Close alignment with internationally recognized best practice avoids duplication of disclosure efforts. It helps improve the consistency and comparability of environmental data, making corporate reporting more efficient and effective, and eases the reporting burden for the thousands of companies that use CDP's climate change and supply chain programs and the GRI Guidelines.

This alignment allows organizations to use the same data points in both reporting channels. The information provided through either channel can form part of a sustainability report using the G4 Guidelines and/or to answer parts of CDP's climate change questionnaire.

By using both reporting frameworks in conjunction, organizations can take advantage of the synergies of the two initiatives.

How to use this document

This publication provides useful cross-references between GRI's G4 Guidelines and CDP's 2016 climate change information request for organizations that wish to use them in conjunction.

The document provides two summary tables which give an overview of how the CDP climate change questions align with GRI's G4 Guidelines, and two comprehensive linkage tables:

- The tables with a red bar on top are for those organizations that have answered CDP's 2016 climate change information request and would like to use this data as input for their G4-based report. The summary table can be found on page 7 and the comprehensive table on pages 10-34.
- The tables with a blue bar on top are for those organizations that have prepared a G4-based report and would like to use this data to answer parts of CDP's 2016 climate change questions. The summary table can be found on pages 8-9 and the comprehensive table on pages 35-62.

Please note that many of CDP's climate change questions are structured as tables and drop-down values within CDP's Online Response System. In addition, all free text questions are restricted by a character limit. For the sake of brevity, this document does not specify the tables, drop-down values and character limit requirements for each question. Therefore, organizations using this document are advised to refer to CDP's climate change guidance document for this information. CDP's climate change guidance is available for download at www.cdp.net/guidance.

¹ The G4 disclosures are also directly aligned with the emissions categories of ISO 14064 (direct GHG emissions, energy indirect GHG emissions, and other indirect GHG emissions).

Using this document to prepare a G4-based report

All information requested in the CDP questionnaire can be reported in a G4-based report, if the climate change related Aspects² (e.g., Energy, Emissions, Products and Services, Public Policy) have been identified as material by the reporting organization³. Please note that the GRI Guidelines provide a comprehensive framework for disclosing economic, environmental, and social performance and impacts, therefore its scope is broader than climate change. In order to prepare a report 'in accordance'⁴ with the G4 Guidelines, either Core or Comprehensive, it is not sufficient to report the disclosures listed in the column 'GRI's Standard Disclosures and Guidance'⁵ of either linkage table.

Given the wider scope of the GRI Guidelines, and for the sake of conciseness, not all GRI Standard Disclosures and Guidance that have an equivalent CDP question are included in their entirety in either table. In these cases, extracts of the GRI Standard Disclosures and Guidance are provided. For the full text of the GRI Standard Disclosures and Guidance featured in the tables, please refer to the **G4 Guidelines – Implementation Manual**.

There are two kinds of disclosures in the G4 Guidelines:

1. **General Standard Disclosures:** these disclosures set the overall context for the report, providing a description of the organization and its reporting process. They apply to all organizations, regardless of their materiality assessment. There are seven types of General Standard Disclosures, ranging from the organization's strategic perspective on addressing sustainability issues, and how it involves stakeholders in this process, to how it approaches key issues such as governance.

These disclosures have a broader scope than their corresponding CDP questions, referring to sustainability or economic, environmental and social issues more generally. Any organization can use these disclosures in the context of climate change.

2. **Specific Standard Disclosures:** these are divided into two areas:

- The Disclosures on Management Approach (DMA) give the organization an opportunity to explain how it is managing its material economic, environmental or social impacts (Aspects), thus providing an overview of its approach to sustainability issues.

The DMA focus on three things: describing why an Aspect is material, how its impacts are being managed, and how the approach to managing this Aspect is being evaluated. These three generic questions can be used to explain the approach to managing any Aspect, including those relating to climate change (e.g., Energy, Emissions, Products and Services, Public Policy).

In addition, GRI provides 'Aspect-specific DMA Guidance', which gives additional detail on what to report for different sustainability topics, including those relating to climate change.

- The Indicators allow companies to provide comparable information on their economic, environmental and social impacts and performance. Much of this is in the form of quantitative data. Indicators are organized by Aspect (e.g., Energy, Emissions, Products and Services, Public Policy). Organizations are only required to provide Indicators on Aspects that they and their stakeholders have identified as material.

2) The word Aspect is used in the GRI Guidelines to refer to the list of subjects covered by the Guidelines (e.g., Energy, Emissions, Products and Services).

3) The process for selecting material Aspects is described on pp. 31–40 of the **G4 Guidelines – Implementation Manual**.

4) The criteria to be applied by an organization in preparing its sustainability report 'in accordance' with the GRI Guidelines are described on pp. 11–14 of the **G4 Guidelines – Reporting Principles and Standard Disclosures**.

5) GRI's 'Standard Disclosures' are the GRI 'questions' organizations answer in their report. GRI's 'Guidance' is the 'how to' section, and provides detailed advice and recommendations for reporting with G4.

Summary of Linkage Table 1: How are CDP's climate change questions (2016) aligned with the GRI Guidelines (G4)?

The following summary table is designed to show at a glance how the CDP climate change questions align with GRI's G4 Guidelines. The comprehensive linkage table is set out on pages 10-34.

CC10. SCOPE 2 EMISSIONS BREAKDOWN		
<p>CC10.1 Do you have Scope 2 emissions sources in more than one country?</p> <p>[drop down menu selection]</p> <p>CC10.1.a Please break down your total gross global Scope 2 emissions and energy consumption by country/region</p> <p>[table question]</p> <p>CC10.2 Please indicate which other Scope 2 emissions breakdowns you are able to provide (tick all that apply)</p> <p>[tick-box selection]</p> <p>CC10.2a By business division</p> <p>[table question]</p> <p>CC10.2b By facility</p> <p>[table question]</p> <p>CC10.2c By activity</p> <p>[table question]</p>	<p>ASPECT: ENERGY</p> <p>G4-EN3 ENERGY CONSUMPTION WITHIN THE ORGANIZATION</p> <p><i>Extract from the Indicator Guidance:</i> Organizations may further disaggregate energy consumption data where this aids transparency or comparability over time. For example, they may disaggregate data by:</p> <ul style="list-style-type: none"> • Business unit or facility • Country • Source type (See Definitions for the listing of non-renewable and renewable energy sources) • Activity type <p>ASPECT: EMISSIONS</p> <p>G4-EN16 ENERGY INDIRECT GREENHOUSE GAS (GHG) EMISSIONS (SCOPE 2)</p> <p><i>Extract from the Indicator Guidance:</i> Organizations may further disaggregate energy indirect (Scope 2) GHG emissions data where this aids transparency or comparability over time. For example, they may disaggregate data by:</p> <ul style="list-style-type: none"> • Business unit or facility • Country • Source type (electricity, heating, cooling, and steam) • Activity type 	<p>CDP requests a breakdown by country/region of Scope 2 emissions and purchased and consumed electricity, heat, steam or cooling, including low-carbon. It then invites further disaggregation of Scope 2 emissions by business division, facility and activity.</p> <p>In GRI, organizations may disaggregate energy consumption data and Scope 2 emissions data where this aids transparency or comparability over time.</p> <p>CDP asks responders to specify whether their breakdown pertains to the market-based Scope 2 figure or their location-based Scope 2 figure.</p>
CC11. ENERGY		
<p>CC11.1 What percentage of your total operational spend in the reporting year was on energy?</p> <p>[drop down menu selection]</p>	<p>See "Comments".</p>	<p>In GRI, organizations report total 'operational spend' under Indicator G4-EC1-a. 'Operational spend' is referred to as 'operating costs' in GRI.</p>
<p>CC11.2 Please state how much heat, steam and cooling in MWh your organization has purchased and consumed during the reporting year</p> <p>[table question]</p> <p>≅ Continues on next page</p>	<p>ASPECT: ENERGY</p> <p>G4-EN3 ENERGY CONSUMPTION WITHIN THE ORGANIZATION</p> <p>a. Report total fuel consumption from non-renewable sources in joules or multiples, including fuel types used.</p> <p>≅ Continues on next page</p>	<p>Both GRI and CDP request data on fuel consumed and electricity, heat(ing), cooling and steam purchased for consumption.</p> <p>≅ Continues on next page</p>

CDP QUESTIONS	GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	COMMENTS
<p>≈ Continues from previous page</p> <p>CC11.3 Please state how much fuel in MWh your organization has consumed (for energy purposes) during the reporting year</p> <p>[number field]</p> <p>CC11.3a Please complete the table by breaking down the total "Fuel" figure entered above by fuel type</p> <p>[table question]</p> <p>CC11.4 Please provide details of the electricity, heat, steam or cooling amounts that were accounted at a low carbon emission factor in the market-based Scope 2 figure you provided in CC8.3a</p> <p>[table question]</p> <p>CC11.5 Please report how much electricity you produce in MWh, and how much electricity you consume in MWh</p> <p>[table question]</p>	<p>≈ Continues from previous page</p> <p>b. Report total fuel consumption from renewable fuel sources in joules or multiples, including fuel types used.</p> <p>c. Report in joules, watt-hours or multiples, the total:</p> <ul style="list-style-type: none"> • Electricity consumption • Heating consumption • Cooling consumption • Steam consumption <p>e. Report total energy consumption in joules or multiples.</p> <p>g. Report the source of the conversion factors used.</p>	<p>≈ Continues from previous page</p> <p>When reporting self-generated energy consumption in both GRI and CDP, organizations do not double-count fuel consumption. For example, if an organization generates electricity from coal and then consumes the generated electricity, the energy consumption is only counted once, under fuel consumption.</p> <p>In GRI, organizations are also requested to report electricity, heating, cooling and steam sold as separate figures. In CDP, if an organization sells self-generated electricity, heat, cooling or steam to other organizations, the organization does not account or report this energy as consumed, but it accounts for the emissions generated for its production (e.g., by burning natural gas) in the Scope 1 figure and the energy content of natural gas as consumed fuel.</p> <p>In GRI, fuel consumption should be broken down by renewable and non-renewable sources, in addition to by fuel type.</p> <p>GRI requests energy data to be reported in joules or multiples. CDP requests data to be reported in MWh.</p> <p>In CDP, organizations are requested to provide details of electricity, heat, steam or cooling amounts that were accounted at a low-carbon emission factor in the Scope 2 figure provided in CC8.3a, including the basis for applying a low-carbon emission factor, and the MWh associated with the low-carbon electricity, heat, steam or cooling.</p> <p>Further, in CDP, organizations are also requested to report further details and breakdowns: total electricity consumed that is purchased, total electricity produced, total renewable electricity produced, and consumed renewable electricity that is produced by the company.</p> <p>GRI requests further details such as the standards, methodologies, and assumptions used for calculating energy consumption within the organization under G4-EN3-f.</p> <p>≈ Continues on next page</p>

CDP QUESTIONS	GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	COMMENTS
		<p>≈ Continues from previous page</p> <p>GRI offers further Indicators on energy consumption outside of the organization (G4-EN4), energy intensity (G4-EN5) and reduction of energy consumption (G4-EN6).</p>
CC12. EMISSIONS PERFORMANCE		
EMISSIONS HISTORY		
<p>CC12.1 How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to the previous year?</p> <p>[drop down menu selection]</p> <p>CC12.1a Please identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined) and for each of them specify how your emissions compare to the previous year</p> <p>[table question]</p> <p>CC12.1b Is your emissions performance calculations in CC12.1 and CC12.1a based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?</p> <p>[drop down menu selection]</p>	<p>ASPECT: EMISSIONS</p> <p>G4-EN19 REDUCTION OF GREENHOUSE GAS (GHG) EMISSIONS</p> <p>a. Report the amount of GHG emissions reductions achieved as a direct result of initiatives to reduce emissions, in metric tons of CO₂ equivalent.</p> <p><i>Extract from the Indicator Guidance:</i> Organizations may choose to report reductions disaggregated by initiatives or groups of initiatives.</p> <p>c. Report the chosen base year or baseline and the rationale for choosing it.</p> <p>e. Report whether the reductions in GHG emissions occurred in direct (Scope 1), energy indirect (Scope 2), other indirect (Scope 3) emissions.</p>	<p>Indicator G4-EN19 asks organizations to report the amount of GHG emissions reductions achieved as a direct result of initiatives to reduce emissions. Reductions in emissions that result from reduced production capacity or outsourcing are not included in G4-EN19. Organizations may report, separately, reductions for Scope 1, Scope 2 and/or Scope 3.</p> <p>GRI also requests disclosure of the gases included in the calculation, and the standards, methodologies and assumptions used, under G4-EN19-b, and G4-EN19-d, respectively.</p> <p>In CDP, organizations are asked to identify the reasons for any change in the gross global emissions (Scope 1 and 2 combined) and provide the change in emissions attributed to the reason as a percentage of the Scope 1 and 2 combined emissions. In addition to emissions reduction activities, reasons reported in CDP may also include divestments, acquisitions, change in boundary, etc. Changes include reduction, increase or constancy in the amount of emissions compared to the previous year.</p> <p>Further, in CDP, responders are asked to specify whether they used a location-based or market-based figure for their calculation in CC12.1 and CC12.1a.</p> <p>While in CDP comparisons are made against the previous year, in GRI organizations have flexibility in selecting the base year or baseline and must then report the rationale for choosing it.</p>

CDP QUESTIONS	GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	COMMENTS
EMISSIONS INTENSITY		
<p>CC12.2 Please describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tonnes CO₂e per unit currency total revenue</p> <p>[table question]</p> <p>CC12.3 Please provide an additional intensity (normalized) metric that is appropriate to your business operations</p> <p>[table question]</p>	<p>ASPECT: EMISSIONS</p> <p>G4-EN18 GREENHOUSE GAS (GHG) EMISSIONS INTENSITY</p> <p>a. Report the GHG emissions intensity ratio.</p> <p>b. Report the organization-specific metric (the ratio denominator) chosen to calculate the ratio.</p> <p>Extract from the Indicator Guidance: Select an appropriate ratio denominator to represent the per-unit output, activity, or any other organization-specific metric. This may include but is not limited to:</p> <ul style="list-style-type: none"> • Units of product • Production volume (metric ton, liter, MWh) • Size (m² floor space) • Number of full-time employees • Monetary units (revenue, sales) <p>c. Report the types of GHG emissions included in the intensity ratio: direct (Scope 1), energy indirect (Scope 2), other indirect (Scope 3).</p>	<p>In GRI, organizations should provide at least one GHG emissions ratio for either Scope 1, Scope 2, Scope 3, or a combination of both Scope 1 and 2. The selection of the most appropriate ratio denominator is left to the discretion of the organization. GRI also requests disclosure of the gases included in the calculation of the intensity ratio under G4-EN18-d.</p> <p>In CDP, organizations need to provide the emissions intensity ratios for Scope 1 and 2 combined per unit currency total revenue, and for an additional intensity (normalized) metric appropriate to their business operations.</p> <p>In addition, CDP requests, for each of the intensity ratios provided, the percentage change from the previous year, the direction of change from the previous year, and the reason for change.</p> <p>While GRI invites organizations to report an intensity figure for their Scope 3 emissions, CDP requests intensity figures for Scope 1 and 2 emissions only.</p>
CC13. EMISSIONS TRADING		
<p>CC13.1 Do you participate in any emissions trading schemes?</p> <p>[drop down menu selection]</p> <p>CC13.1a Please complete the following table for each of the emission trading schemes in which you participate</p> <p>[table question]</p> <p>CC13.1b What is your strategy for complying with the schemes in which you participate or anticipate participating?</p> <p>[free text question]</p> <p>≈ Continues on next page</p>	<p>See "Comments".</p>	<p>GRI does not provide specific guidance on the disclosure of emissions trading schemes or project-based carbon credits or credit purchase. However, organizations may report this as part of their Disclosures on Management Approach for the Emissions Aspect.</p>

CDP QUESTIONS	GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	COMMENTS

Linkage Table 2: How are the GRI Guidelines (G4) aligned with CDP's climate change questions (2016)?

The table below details the links between GRI's G4 Guidelines and CDP's climate change questions (2016), and is useful for those organizations that have prepared a G4-based report and would like to use this information to answer parts of CDP's climate change questions. The comments support and expand on the links between the two sets of information.

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
GENERAL STANDARD DISCLOSURES		
<p>G4-1 <i>Extracts from G4-1-a:</i></p> <p>a. Provide a statement from the most senior decision-maker of the organization (such as CEO, chair, or equivalent senior position) about the relevance of sustainability to the organization and the organization's strategy for addressing sustainability.</p> <p>[...]</p> <p>The statement should include:</p> <ul style="list-style-type: none"> [...] Views on performance with respect to targets Outlook on the organization's main challenges and targets for the next year and goals for the coming 3–5 years 	<p>CC2.2 Is climate change integrated into your business strategy?</p> <p>[drop down menu selection]</p> <p>CC2.2a Please describe the process of how climate change is integrated into your business strategy and any outcomes of this process</p> <p>[free text question]</p> <p>CC3.1 Did you have an emissions reduction or renewable energy consumption or production target that was active (ongoing or reached completion) in the reporting year?</p> <p>[drop down menu selection]</p> <p>CC3.1e For all of your targets, please provide details on the progress made in the reporting year</p> <p>[table question]</p> <p>CC3.1f Please explain: (i) why you do not have a target; and (ii) forecast how your emissions will change over the next five years</p> <p>[free text question]</p>	<p>G4-1 is a high-level disclosure that allows reporters to stress strategic priorities, key achievements, and a high-level view on performance and outlook. Thus, G4-1 has a broad scope, referring not only to climate change, but to sustainability issues more generally.</p> <p>If climate change is a strategic issue for the reporting organization, G4-1 offers the possibility to highlight this.</p> <p>G4's Specific Standard Disclosures invite disclosure on climate change related Aspects (e.g., Energy, Emissions, Products and Services) on a more specific level.</p>

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
<p>G4-2 Extracts from G4-2-a:</p> <p>a. Provide a description of key impacts, risks, and opportunities.</p> <p>Section One should [...] include:</p> <ul style="list-style-type: none"> • A description of the significant economic, environmental and social impacts of the organization, and associated challenges and opportunities. This includes the effect on stakeholders' rights as defined by national laws and the expectations in internationally recognized standards and norms • An explanation of the approach to prioritizing these challenges and opportunities <p>[...]</p> <p>Section Two should focus on the impact of sustainability trends, risks, and opportunities on the long-term prospects and financial performance of the organization. This should concentrate specifically on information relevant to financial stakeholders or that could become so in the future. Section Two should include the following:</p> <ul style="list-style-type: none"> • A description of the most important risks and opportunities for the organization arising from sustainability trends • Prioritization of key sustainability topics as risks and opportunities according to their relevance for long-term organizational strategy, competitive position, qualitative, and (if possible) quantitative financial value drivers • Table(s) summarizing: <ul style="list-style-type: none"> • Targets, performance against targets, and lessons learned for the current reporting period • Targets for the next reporting period and medium term objectives and goals (that is, 3–5 years) related to key risks and opportunities • Concise description of governance mechanisms in place specifically to manage these risks and opportunities, and identification of other related risks and opportunities 	<p>CC2.1 Please select the option that best describes your risk management procedures with regard to climate change risks and opportunities</p> <p>[drop down menu selection]</p> <p>CC2.1a Please provide further details on your risk management procedures with regard to climate change risks and opportunities</p> <p>[table question]</p> <p>CC2.1b Please describe how your risk and opportunity identification processes are applied at both company and asset level</p> <p>[free text question]</p> <p>CC2.1c How do you prioritize the risks and opportunities identified?</p> <p>[free text question]</p> <p>CC2.2 Is climate change integrated into your business strategy?</p> <p>[drop down menu selection]</p> <p>CC2.2a Please describe the process of how climate change is integrated into your business strategy and any outcomes of this process</p> <p>[free text question]</p> <p>CC3.1a – CC3.1f on climate change targets;</p> <p>CC5.1, CC5.1a – CC5.1c on climate change risks;</p> <p>CC6.1, CC6.1a – CC6.1c on climate change opportunities.</p>	<p>G4-2 is a high-level disclosure that allows organizations to identify key impacts, risks and opportunities. Thus, G4-2 has a broad scope, referring not only to climate change, but to sustainability issues more generally.</p> <p>If the organization has identified key climate change related impacts, risks and opportunities, G4-2 offers the possibility to highlight this.</p> <p>G4's Specific Standard Disclosures invite disclosure on climate change related Aspects (e.g., Energy, Emissions, Products and Services) on a more specific level.</p> <p>The information requested by CC3.1a – CC3.1c can also be reported in more detail under the DMA for the Emissions Aspect. In G4-2, targets can be highlighted and presented in connection with the long-term prospects of the organization.</p> <p>Information on risks (CC5.1, CC5.1a – CC5.1c) can be reported in more detail in G4-EC2.</p> <p>Information on opportunities (CC6.1, CC6.1a – CC6.1c) can be reported in more detail in G4-EC2.</p>

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
<p>G4-15</p> <p>a. List externally developed economic, environmental and social charters, principles, or other initiatives to which the organization subscribes or which it endorses.</p> <p>G4-16</p> <p>a. List memberships of associations (such as industry associations) and national or international advocacy organizations in which the organization:</p> <ul style="list-style-type: none"> • Holds a position on the governance body • Participates in projects or committees • Provides substantive funding beyond routine membership dues • Views membership as strategic <p>This refers primarily to memberships maintained at the organizational level.</p>	<p>CC2.3b</p> <p>Are you on the Board of any trade associations or provide funding beyond membership?</p> <p>[drop down menu selection]</p> <p>CC2.3c</p> <p>Please enter the details of those trade associations that are likely to take a position on climate change legislation</p> <p>[table question]</p> <p>CC2.3d</p> <p>Do you publicly disclose a list of all the research organizations that you fund?</p> <p>[drop down menu selection]</p>	<p>G4-15 and G4-16 have a broader scope than the corresponding CDP questions, referring to economic, environmental and social issues more generally. G4-16 requests further details, such as the list of memberships of associations and national or international advocacy organizations in which the organization participates in projects or committees or views membership as strategic.</p>
<p>G4-20</p> <p>a. For each material Aspect, report the Aspect Boundary within the organization, as follows:</p> <ul style="list-style-type: none"> • Report whether the Aspect is material within the organization • If the Aspect is not material for all entities within the organization (as described in G4-17⁷), select one of the following two approaches and report either: <ul style="list-style-type: none"> • The list of entities or groups of entities included in G4-17 for which the Aspect is not material or • The list of entities or groups of entities included in G4-17 for which the Aspects is material • Report any specific limitation regarding the Aspect Boundary within the organization 	<p>CC8.4</p> <p>Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?</p> <p>[drop down menu selection]</p> <p>CC8.4a</p> <p>Please provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure</p> <p>[table question]</p>	<p>In GRI, organizations should report if information presented for an Indicator (e.g., G4-EN15, G4-EN16) does not cover the Boundary identified for the material Aspect (e.g., Emissions) in General Standard Disclosure G4-20.</p> <p>For each source of Scope 1 and Scope 2 emissions that are within the selected reporting boundary but which are not included in the disclosure, CDP requests an explanation of why the source is excluded.</p> <p>GRI allows organizations to either list the entities that are included or the entities that are excluded, with reference to the entities listed under G4-17. CDP asks for the entities that have been excluded only.</p>

7) G4-17

- a. List all entities included in the organization's consolidated financial statements or equivalent documents.
- b. Report whether any entity included in the organization's consolidated financial statements or equivalent documents is not covered by the report.

The organization can report on this Standard Disclosure by referencing the information in publicly available consolidated financial statements or equivalent documents.

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
INDICATORS		
G4-EN15 DIRECT GREENHOUSE GAS (GHG) EMISSIONS (SCOPE 1)		
a. Report gross direct (Scope 1) GHG emissions in metric tons of CO ₂ equivalent, independent of any GHG trades, such as purchases, sales, or transfers of offsets or allowances.	CC8.2 Please provide your gross global Scope 1 emissions figures in metric tonnes CO ₂ e [number field]	G4-EN15-a specifies that the gross Scope 1 GHG emissions should be independent of any GHG trades, such as purchases, sales, or transfers of offset or allowances. In its guidance document, CDP also indicates that gross emissions should be reported before any reductions for offsets are made.
b. Report gases included in the calculation (whether CO ₂ , CH ₄ , N ₂ O, HFCs, PFCs, SF ₆ , NF ₃ , or all).	CC9.2 Please indicate which other Scope 1 emissions breakdowns you are able to provide (tick all that apply) [tick-box question] CC9.2c Please break down your total gross global Scope 1 emissions by GHG type [table question]	
c. Report biogenic CO ₂ emissions in metric tons of CO ₂ equivalent separately from the gross direct (Scope 1) GHG emissions.	CC8.9 Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization? [drop down menu selection] CC8.9a Please provide the emissions from biologically sequestered carbon relevant to your organization in metric tonnes CO ₂ [number field]	In CC8.9 CDP invites disclosure of carbon dioxide emissions from biologically sequestered carbon from sources deemed relevant by the responder, whether direct or indirect. In GRI, organizations are requested to report carbon dioxide emissions from biologically sequestered carbon separately from the gross direct (Scope 1) GHG emissions. In GRI, carbon dioxide emissions from biologically sequestered carbon are referred to as 'biogenic CO ₂ emissions'.
d. Report the chosen base year, the rationale for choosing the base year, emissions in the base year, and the context for any significant changes in emissions that triggered recalculations of base year emissions.	CC7.1 Please provide your base year and base year emissions (Scopes 1 and 2) [table question]	In addition to the base year and the base year emissions, G4-EN15-d requests the rationale for choosing the base year and the context for any significant changes in emissions that triggered recalculations of base year emissions. In CDP, responders are asked to provide a market-based Scope 2 figure and a location-based Scope 2 figure.

<p>G4-EN16 ENERGY INDIRECT GREENHOUSE GAS (GHG) EMISSIONS (SCOPE 2)</p> <hr style="border-top: 1px dotted #00aaff;"/> <p>a. Report gross energy indirect (Scope 2) GHG emissions in metric tons of CO₂ equivalent, independent of any GHG trades, such as purchases, sales, or transfers of offsets or allowances.</p>	<p>CC8.3 Does your company have any operations in markets providing product or supplier specific data in the form of contractual instruments? [drop down menu selection]</p> <p>CC8.3a Please provide your gross global Scope 2 emissions figures in metric tonnes CO₂e [table question]</p>	<p>G4-EN16-a specifies that the gross Scope 2 GHG emissions should be independent of any GHG trades, such as purchases, sales, or transfers of offset or allowances.</p> <p>CDP allows companies to reflect their purchase of low-carbon electricity in their Scope 2 figure, provided that the purchase has been tracked by appropriate instruments, and that the production and consumption of the electricity has taken place within the same grid region. CDP's approach to Scope 2 accounting is available in the technical note "Accounting of Scope 2 emissions", available at www.cdp.net/guidance.</p>

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
b. Report gases included in the calculation, if available.	No linkage.	
c. Report the chosen base year, the rationale for choosing the base year, emissions in the base year, and the context for any significant changes in emissions that triggered recalculations of base year emissions.	<p>CC7.1 Please provide your base year and base year emissions (Scopes 1 and 2)</p> <p>[table question]</p>	<p>In addition to the base year and the base year emissions, G4-EN16-c requests the rationale for choosing the base year and the context for any significant changes in emissions that triggered recalculations of base year emissions.</p> <p>In CDP, responders are asked to provide a market-based Scope 2 figure and a location-based Scope 2 figure.</p>
d. Report standards, methodologies, and assumptions used.	<p>CC7.2 Please give the name of the standard, protocol or methodology you have used to collect activity data and calculate Scope 1 and Scope 2 emissions</p> <p>[drop down menu selection]</p> <p>CC7.2a If you have selected "Other" in CC7.2 please provide details of the standard, protocol or methodology you have used to collect activity data and calculate Scope 1 and Scope 2 emissions</p> <p>[free text question]</p> <p>CC8.5 Please estimate the level of uncertainty of the total gross global Scope 1 and 2 emissions figures that you have supplied and specify the sources of uncertainty in your data gathering, handling and calculations</p> <p>[table question]</p>	
e. Report the source of the emission factors used and the global warming potential (GWP) rates used or a reference to the GWP source, if available.	<p>CC7.3 Please give the source for the global warming potentials you have used</p> <p>[table question]</p> <p>CC7.4 Please give the emissions factors you have applied and their origin; alternatively, please attach an Excel spreadsheet with this data at the bottom of this page</p> <p>[table question]</p>	<p>G4-EN16-e requests either a reference to the global warming potential source or the global warming potential rates.</p> <p>CC7.3 requests a breakdown of the global warming potential source by gas.</p> <p>G4-EN16-e requests the source of the emissions factors used.</p> <p>In addition to the source of the emissions factors used, CC7.4 also requests the actual emissions factors, the fuel/material/energy to which the emissions factors apply, and the unit of measurement.</p>

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
<p>f. Report the chosen consolidation approach for emissions (equity share, financial control, operational control).</p>	<p>CC8.1 Please select the boundary you are using for your Scope 1 and 2 greenhouse gas inventory</p> <p>[drop down menu selection]</p>	<p>Both GRI and CDP recommend selecting a consistent consolidation approach for emissions, for both Scope 1 and 2.</p>
<p>Extract from the Indicator Guidance: Organizations may further disaggregate energy indirect (Scope 2) GHG emissions data where this aids transparency or comparability over time. For example, they may disaggregate data by:</p> <ul style="list-style-type: none"> • Business unit or facility • Country • Source type (electricity, heating, cooling, and steam) • Activity type 	<p>CC10.1 Do you have Scope 2 emissions sources in more than one country?</p> <p>[drop down menu selection]</p> <p>CC10.1.a Please break down your total gross global Scope 2 emissions and energy consumption by country/region</p> <p>[table question]</p> <p>CC10.2 Please indicate which other Scope 2 emissions breakdowns you are able to provide (tick all that apply)</p> <p>[tick-box selection]</p> <p>CC10.2a By business division</p> <p>[table question]</p> <p>CC10.2b By facility</p> <p>[table question]</p> <p>CC10.2c By activity</p> <p>[table question]</p>	<p>CDP requests a breakdown by country/region of Scope 2 emissions. It then invites further disaggregation of Scope 2 emissions by business division, facility and activity.</p> <p>In GRI, organizations may disaggregate Scope 2 emissions data where this aids transparency or comparability over time.</p> <p>In CDP, respondents are asked to specify whether their breakdown pertains to the market-based Scope 2 figure or their location-based Scope 2 figure.</p>

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
<p>G4-EN17 OTHER INDIRECT GREENHOUSE GAS (GHG) EMISSIONS (SCOPE 3)</p> <p>a. Report gross other indirect (Scope 3) GHG emissions in metric tons of CO₂ equivalent, excluding indirect emissions from the generation of purchased or acquired electricity, heating, cooling, and steam consumed by the organization (these indirect emissions are reported in Indicator G4-EN16). Exclude any GHG trades, such as purchases, sales, or transfers of offsets or allowances.</p> <p>b. Report gases included in the calculation, if available.</p>	<p>CC14.1 Please account for your organization's Scope 3 emissions, disclosing and explaining any exclusions</p> <p>[table question]</p>	<p>In GRI, organizations report the Scope 3 emissions categories and activities included in the calculation of the gross Scope 3 emissions under G4-EN17-d. Organizations may disaggregate data by the categories and activities documented in the WRI and WBCSD 'GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard'.</p> <p>CDP requests a disaggregation of data by the categories and activities documented in the WRI and WBCSD 'GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard'.</p> <p>CDP requests further details on whether each Scope 3 category is relevant and/or calculated, the emissions calculation methodology, and the percentage of Scope 3 emissions calculated using primary data.</p> <p>CDP responders may report the gases included in the calculation under the "Emissions calculation methodology" column in CC14.1.</p>
<p>c. Report biogenic CO₂ emissions in metric tons of CO₂ equivalent separately from the gross other indirect (Scope 3) GHG emissions.</p>	<p>CC8.9 Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization?</p> <p>[drop down menu selection]</p> <p>CC8.9a Please provide the emissions from biologically sequestered carbon relevant to your organization in metric tonnes CO₂</p> <p>[number field]</p>	<p>In CC8.9 CDP invites disclosure of carbon dioxide emissions from biologically sequestered carbon from sources deemed relevant by the responder, whether direct or indirect.</p> <p>In GRI, organizations are requested to report carbon dioxide emissions from biologically sequestered carbon separately from the gross other indirect (Scope 3) GHG emissions.</p> <p>In GRI, carbon dioxide emissions from biologically sequestered carbon are referred to as 'biogenic CO₂ emissions'.</p>

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
<p>d. Report other indirect (Scope 3) emissions categories and activities included in the calculation.</p> <p>Extract from the Indicator Guidance: For each category and activity [...], provide a figure in CO₂ equivalent or an explanation of why certain data are not included.</p>	<p>CC14.1 Please account for your organization's Scope 3 emissions, disclosing and explaining any exclusions</p> <p>[table question]</p>	
<p>e. Report the chosen base year, the rationale for choosing the base year, emissions in the base year, and the context for any significant changes in emissions that triggered recalculations of base year emissions.</p>	<p>No linkage.</p>	
<p>f. Report standards, methodologies, and assumptions used.</p>	<p>CC14.1 Please account for your organization's Scope 3 emissions, disclosing and explaining any exclusions</p> <p>[table question]</p>	<p>In its table, CDP specifically asks organizations to report the emissions calculation methodology (column 4), and the percentage of emissions calculated using primary data (column 5).</p>
<p>g. Report the source of the emission factors used and the global warming potential (GWP) rates used or a reference to the GWP source, if available.</p>	<p>CC14.1 Please account for your organization's Scope 3 emissions, disclosing and explaining any exclusions</p> <p>[table question]</p>	<p>In its table, CDP specifically asks organizations to report the emissions calculation methodology (column 4), including GWP values used.</p>
<p>G4-EN18 GREENHOUSE GAS (GHG) EMISSIONS INTENSITY</p>		
<p>a. Report the GHG emissions intensity ratio.</p> <p>b. Report the organization-specific metric (the ratio denominator) chosen to calculate the ratio.</p> <p>Extract from the Indicator Guidance: Select an appropriate ratio denominator to represent the per-unit output, activity, or any other organization-specific metric. This may include but is not limited to:</p> <ul style="list-style-type: none"> • Units of product • Production volume (metric ton, liter, MWh) • Size (m² floor space) • Number of full-time employees • Monetary units (revenue, sales) <p>c. Report the types of GHG emissions included in the intensity ratio: direct (Scope 1), energy indirect (Scope 2), other indirect (Scope 3).</p>	<p>CC12.2 Please describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tonnes CO₂e per unit currency total revenue</p> <p>[table question]</p> <p>CC12.3 Please provide an additional intensity (normalized) metric that is appropriate to your business operations</p> <p>[table question]</p>	<p>In GRI, organizations should provide at least one GHG emissions ratio for either Scope 1, Scope 2, Scope 3, or a combination of both Scope 1 and 2. The selection of the most appropriate ratio denominator is left to the discretion of the organization.</p> <p>In CDP, organizations need to provide the emissions intensity (normalized) ratios for Scope 1 and 2 combined per unit currency total revenue, and for an additional intensity metric appropriate to their business operations.</p> <p>In addition, CDP requests, for each of the intensity ratios provided, the percentage of change from the previous year, the direction of change from the previous year, and the reason for change.</p> <p>CDP does not request the reporting of an intensity figure for Scope 3 emissions.</p>

GRI'S G4 STANDARD DISCLOSURES AND GUIDANCE	CDP QUESTIONS	COMMENTS
d. Report gases included in the calculation.	No linkage.	
<p>G4-EN19 REDUCTION OF GREENHOUSE GAS (GHG) EMISSIONS</p> <p>a. Report the amount of GHG emissions reductions achieved as a direct result of initiatives to reduce emissions, in metric tons of CO₂ equivalent.</p> <p><i>Extract from the Indicator Guidance:</i> Organizations may choose to report reductions disaggregated by initiatives or groups of initiatives.</p>	<p>CC3.3a Please identify the total number of projects at each stage of development, and for those in the implementation stages, the estimated CO₂e savings</p> <p>[table question]</p> <p>CC3.3b For those initiatives implemented in the reporting year, please provide details in the table below</p> <p>[table question]</p> <p>CC12.1 How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to the previous year?</p> <p>[drop down menu selection]</p> <p>CC12.1a Please identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined) and for each of them specify how your emissions compare to the previous year</p> <p>[table question]</p> <p>CC14.3 Are you able to compare your Scope 3 emissions for the reporting year with those for the previous year for any sources?</p> <p>[drop down menu selection]</p> <p>CC14.3a Please identify the reasons for any change in your Scope 3 emissions and for each of them specify how your emissions compare to the previous year</p> <p>[table question]</p>	<p>Indicator G4-EN19 asks organizations to report the amount of GHG emissions reductions achieved as a direct result of initiatives to reduce emissions. Reductions in emissions that result from reduced production capacity or outsourcing are not included in G4-EN19. Organizations may report, separately, reductions for Scope 1, Scope 2 and/or Scope 3.</p> <p>In CDP, organizations are asked to identify the reasons for any change in the gross global emissions (Scope 1 and 2 combined) and Scope 3 emissions and provide the change in emissions attributed to the reason as a percentage of the Scope 1 and 2 combined, and Scope 3 emissions. In addition to emissions reduction activities, reasons reported in CDP may also include divestments, acquisitions, change in boundary, etc. Changes include reduction, increase or constancy in the amount of emissions compared to the previous year.</p> <p>In CC12.1b, responders are asked to specify whether they used a location-based or market-based figure for their calculation in CC12.1 and CC12.1a.</p>
b. Report gases included in the calculation (whether CO ₂ , CH ₄ , N ₂ O, HFCs, PFCs, SF ₆ , NF ₃ , or all).	No linkage.
